

Databound Healthcare Solutions TM

EMUE 5.0 EDITIONS & CONNECTOR MODEL

On November 10th, 2016, Databound Healthcare Solutions released EMUE 5.0. In conjunction with this major release, we will also be introducing new EMUE edition names and a new pricing model.

What is new with the EMUE 5.0 Release?

- Web Services support, including four new web service definition files:
 - Eligibility/Claim status
 - Address Verification
 - NPI Lookup
 - FHIR
- The Object Definition Builder for quickly building XML files
- New web scripting functions
- Improved usability, fit, and finish of the product

Renaming Editions

EMUE will continue to be offered as two editions.

- Standard Edition - formerly known as Express. This is the most basic edition of EMUE available.
- Advanced Edition - formerly known as Enterprise. This includes all of EMUE's core functionality, Dashboard, plus the ability to add Connectors.

What is a Connector?

The new Connector framework will allow our customers to choose the Electronic Medical Record (EMR) products and extensibility tools that they want to “plug” EMUE into which best meet their needs. As Databound moves to expand our automation to other EMRs, customers can pick the Connectors they need for the systems they want to work with.

EMUE 5.0 will offer the following Connectors

- Web Services¹
- Web Scripting
- Soarian²
- Terminal (MS4, Signature, Invision, RPMS¹)

License Types

Standard Edition – Per PC, Bulk Pack

Advanced Edition – Per PC, Site

The Web Services Connector will only be available with a Site license.

If you have specific questions about changing editions, purchasing a new connector or purchasing additional licenses, please contact Paul Martin at pmartin@databound.com or Mike Burhans mburhans@databound.com.

¹ Note: New capability with EMUE 5.0

² The “Soarian” and “Web Scripting” Connectors are the same and sold as a single license. They are listed separately here for explanation purposes only.
