

The logo for Dashboard, featuring the word "Dashboard" in a bold, sans-serif font with a stylized orange and blue swoosh underneath. The background of the top section is a light blue gradient with a dense pattern of various blue icons representing different aspects of healthcare, technology, and business, such as a stethoscope, a laptop, a gear, a heart, and a dollar sign.

Dashboard™

Dashboard

Real-time Process Scheduling/Monitoring

Databound Healthcare Solutions™

Dashboard gives information technology staff confidence in the status of their automated processes and saves them time managing scripts and responding when things don't go as planned.

Gain Insight, **Control** and Validate Critical **Processes**

See More, Know More

Hospital IT staff using automated processes often have to schedule and monitor scripts running across one or many computers. By giving IT personnel easy remote access to script status, they can gain insight, control, and validation of processes by quickly monitoring scripts running across multiple machines, managing and viewing schedules, and detecting problems earlier.

With the Dashboard's multiple views, staff can see the status of scripts, display information about each script, create scheduled tasks and see schedules for upcoming periods so administrators can plan their processing time more effectively and ensure a seamless automation process.

Track More, Detect More

Dashboard improves resource management by providing a tool that easily monitors the web and terminal tasks associated with automation. By managing script processing with Dashboard, IT personnel save time and see the following benefits:

- Reduce time managing scripts
- Create scheduled tasks
- Detect problems faster
- View scripts on multiple PCs
- View scheduled scripts before they run
- Review log files quickly
- Track and resolve processing errors in real time
- Start or Terminate a script
- Notification of scripts that haven't run

Databound Healthcare Solutions™

how it works

Customer Quotes

"It has been valuable to be able to check into the Dashboard remotely, from various devices, to validate that my scripts are running. Now I can launch a script before I leave for work, check in after-hours, and trouble-shoot as necessary. I can squeeze more work into the day, before day-end processing."

*Petra Reichmann
St. Peters Health Care, Albany, NY*

"I honestly never imagined the Dashboard would become such a useful tool. The fact that we can glance at one screen and instantly know what ran and what failed is great."

*Carlos Alvarez
Baptist Health South Florida*

"We used to get 3 to 5 calls per week from users when they were waiting for a process. We haven't had a single call since we started using Dashboard because we always detect problems before the user does."

*Tana Sells
Midwest Health Systems*

SYSTEM VIEW

Users can see the status of scripts without having to log in to each machine.

SCRIPT VIEW

Shows all scripts for all machines registered to the Dashboard.

TASK VIEW

Create and manage scheduled tasks for all machines on your Dashboard.

CALENDAR VIEW

Displays scheduled EMUE scripts in a calendar format.

Save More, Do More

In a follow-up survey three months after Dashboard was released, 100% of the respondents agreed that Dashboard is saving them time.
